Philosophy and the State in France Nannerl O. Keohane,2017-03-14 Tracing the development of French political thought in the seventeenth century, Nannerl Keohane explores a quite different emphasis on the indivisibility of sovereignty and the expression of interests rather than rights. Originally published in 1980. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Early Modern French Thought Michael Moriarty,2003 This book is an examination of three major French thinkers of the seventeenth century, Descartes, Pascal, and Malebranche, of whom the latter two are comparatively little studied in the English-speaking world. It deals with a common attitude of suspicion towards everyday experience, which they see as dominated and obscured by sensation, imagination, and the presence of the body. This attitude, however, obliges them to develop detailed and sophisticated accounts of the shaping of experience not only by the body but by interpersonal and social relationships, and of the tension between humannature as it is and as we experience it. The treatment of Descartes thus challenges the interpretation that sees him as eliminating the body from 'subjectivity', while that of Pascal and Malebranche shows how their critical attitude towards experience (a fertile source for twentieth-century Frenchthinkers) is linked with their religious doctrines, especially their Augustinian emphasis on Original Sin.

French Philosophy, 1572-1675 Desmond M. Clarke,2016-04-15 Desmond M. Clarke presents a thematic history of French philosophy from the middle of the sixteenth century to the beginning of Louis XIV's reign. While the traditional philosophy of

the schools was taught throughout this period by authors who have faded into permanent obscurity, a whole generation of writers who were not professional philosophers—some of whom never even attended a school or college—addressed issues that were prominent in French public life. Clarke explores such topics as the novel political theory espoused by monarchomachs, such as Bèze and Hotman, against Bodin's account of absolute sovereignty; the scepticism of Montaigne, Charron, and Sanches; the ethical discussions of Du Vair, Gassendi, and Pascal; innovations in natural philosophy that were inspired by Mersenne and Descartes and implemented by members of the Académie royale des sciences; theories of the human mind from Jean de Silhon to Cureau de la Chambre and Descartes; and the novel arguments in support of women's education and equality that were launched by De Gournay, Du Bosc, Van Schurman and Poulain de la Barre. The writers involved were lawyers, political leaders, theologians, and independent scholars and they acknowledged, almost unanimously, the authority of the Bible as a source of knowledge that was claimed to be more reliable than the fragile powers of human understanding. Since they could not agree, however, on which books of the Bible were canonical or how that should be understood, their discussions raised questions about faith and reason that mirrored those involved in the infamous Galileo affair.

19th and 20th Century French Philosophy Frederick Charles Copleston, 2003-01-01 Copleston, an Oxford Jesuit and specialist in the history of philosophy, created his history as an introduction for Catholic ecclesiastical seminaries. The 11-volume series gives an accessible account of each philosopher's work, and explains their relationship to the work of other philosophers.

17th-Century French Writers Jamie Hartman, 2012-05-10 What's so special about René Descartes? In this new, compelling book from author Jamie Hartman, find out more about René Descartes ...Ren?? Descartes French pronunciation:?? was a French philosopher, mathematician, and writer who spent most of his adult life in the Dutch Republic. He has been dubbed the 'Father of Modern Philosophy', and much subsequent Western philosophy is a response to his writings, which are studied closely to this day. In particular, his *Meditations on First Philosophy* continues to be a standard text at most university philosophy departments. Descartes' influence in mathematics is equally apparent; the Cartesian coordinate system ??? allowing algebraic equations to be expressed as geometric shapes in a two-dimensional coordinate system ??? was named after him. He is credited as the father of analytical geometry, the bridge between algebra and geometry, crucial to the discovery of infinitesimal calculus and analysis. Descartes was also one of the key figures in the Scientific Revolution and has been described as an example of genius. Descartes frequently sets his views apart from those of his predecessors. In the opening section of the *Passions of the Soul*, a treatise on the Early Modern version of what are now commonly called emotions, Descartes goes so far as to assert that he will write on this topic as if no one had written on these matters before.

Many elements of his philosophy have precedents in late Aristotelianism, the revived Stoicism of the 16th century, or in earlier philosophers like St. Augustine. In his natural philosophy, he differs from the schools on two major points: First, he rejects the analysis of corporeal substance into matter and form; second, he rejects any appeal to ends—divine or natural—in explaining natural phenomena. In his theology, he insists on the absolute freedom of God's act of creation. Descartes was a major figure in 17th-century continental rationalism, later advocated by Baruch Spinoza and Gottfried Leibniz, and opposed by the empiricist school of thought consisting of Hobbes, Locke, Berkeley, Jean-Jacques Rousseau, and Hume. Leibniz, Spinoza and Descartes were all well versed in mathematics as well as philosophy, and Descartes and Leibniz contributed greatly to science as well. He is perhaps best known for the philosophical statement *Cogito ergo sum*, found in part IV of *Discourse on the Method* and §7 of part I of *Principles of Philosophy*. So, what separates this book from the rest? A comprehensive narrative of René Descartes, this book gives a full understanding of the subject. French Philosophy Stephen Gaukroger, Knox Peden, 2020 This book covers French philosophy from its origins in the sixteenth century up to the present, analysing it within its social, political, and cultural context. Throughout, the book explores the dilemma sustained by the markedly national conception of French philosophy, and its history of speaking out on matters of universal concern.

Meditations on First Philosophy/ Meditationes de prima philosophia René Descartes, 1990-08-31 This bilingual edition of Descartes' *Meditations on First Philosophy* is aimed both specifically at serious students and professors of philosophy, and generally at anyone motivated by a strong philosophical interest.

Selections from the Principles of Philosophy Rene Descartes,2019-10-08 René Descartes (31 March 1596 - 11 February 1650) was a French philosopher, mathematician, and scientist. A native of the Kingdom of France, he spent about 20 years (1629-1649) of his life in the Dutch Republic after serving for a while in the Dutch States Army of Maurice of Nassau, Prince of Orange and the Stadtholder of the United Provinces. One of the most notable intellectual figures of the Dutch Golden Age, [19] Descartes is also widely regarded as one of the founders of modern philosophy. Many elements of Descartes' philosophy have precedents in late Aristotelianism, the revived Stoicism of the 16th century, or in earlier philosophers like Augustine. In his natural philosophy, he differed from the schools on two major points: first, he rejected the splitting of corporeal substance into matter and form; second, he rejected any appeal to final ends, divine or natural, in explaining natural phenomena.[20] In his theology, he insists on the absolute freedom of God's act of creation. Refusing to accept the authority of previous philosophers, Descartes frequently set his views apart from the philosophers who preceded him. In the opening section of the *Passions of the Soul*, an early modern treatise on emotions, Descartes goes so far as to assert that he will write on this topic as if no one had written on these matters before. His best known philosophical statement is I think, therefore I am (French: Je pense, donc je suis; Latin: cogito, ergo sum), found in *Discourse on the Method* (1637; written in French and Latin) and *Principles of Philosophy* (1644; written in Latin) Descartes laid the foundation for 17th-century continental rationalism, later advocated by Spinoza and Leibniz, and was later opposed by the empiricist school of thought consisting of Hobbes, Locke, Berkeley, and Hume. Leibniz, Spinoza, and Descartes were all well-versed in mathematics as well as philosophy, and Descartes and Leibniz contributed greatly to science as well. Descartes' *Meditations on First Philosophy* (1641) continues to be a standard text at most university philosophy departments. Descartes' influence in mathematics is equally apparent; the Cartesian coordinate system was named after him. He is credited as the father of analytical geometry, the bridge between algebra and geometry--used in the discovery of infinitesimal calculus and analysis. Descartes was also one of the key figures in the Scientific Revolution.

Fallen Nature, Fallen Selves Michael Moriarty, 2006-05-25 From the late sixteenth to the late seventeenth centuries, French writing is especially concerned with analysing human nature. The ancient ethical vision of man's nature and goal (we achieve fulfilment by living our lives according to reason, the highest and noblest element of our nature) survives, even, to some extent, in Descartes. But it is put into question especially by the revival of St Augustine's thought, which focuses on the contradictions and disorders of human desires and aspirations. Analyses of behaviour display a powerful suspicion of appearances. Human beings are increasingly seen as motivated by self-love: they are driven by the desire for their own advantage, and take a narcissistic delight in their own image. Moral and religious writers re-emphasize the traditional imperative of self-knowledge, but in such a way as to suggest the difficulties of knowing oneself. Operating with the Cartesian distinction between mind and body, they emphasize the imperceptible influence of bodily processes on our thought and attitudes. They analyse human beings' ignorance (due to self-love) of their own motives and qualities, and the illusions under which they live their lives. Their critique of human behaviour is no less searching than that of writers who have broken with traditional religious morality, such as Hobbes and Spinoza. A wide range of authors is studied, some well-known, others much less so: the abstract and general analyses of philosophers and theologians (Descartes, Jansenius, Malebranche) are juxtaposed with the less systematic and more concrete investigations of writers like Montaigne and La Rochefoucauld, not to mention the theatre of Corneille, Molière, and Racine.
